

Multiple Choice Quiz

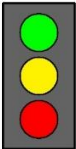

Q1. How many steps are involved in cell signalling?

- | | |
|---|---|
| A | 3 |
| B | 6 |
| C | 7 |

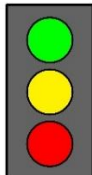

Q2. Another term used for signalling molecule is:

- | | |
|---|----------|
| A | Gene |
| B | Ligand |
| C | Caspases |

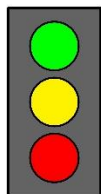

Q3. The type of signalling where a cell secretes signalling molecules that bind to receptors on its own cell surface and nearby cells.

- | | |
|---|-----------|
| A | Endocrine |
| B | Autocrine |
| C | Paracrine |

Q4. The type of signalling where a cell secretes signalling molecules that affects nearby cells

- | | |
|---|-----------|
| A | Endocrine |
| B | Autocrine |
| C | Paracrine |

Q5. Endocrine glands secrete:

- | | |
|---|----------|
| A | hormones |
| B | enzymes |
| C | neurons |

Answers

Q3. B

Q4. C

Q1. A: 3

Q2. B

Q5. A
